

**TYPIFICATIONS AND A NOMENCLATURAL CHANGE
IN SOME EASTERN NORTH AMERICAN *OPUNTIA* (CACTACEAE)**

ABSTRACT

Recent advances in our understanding of the evolutionary relationships of eastern North American *Opuntia* closely allied to *Opuntia humifusa*, i.e., the *O. humifusa* complex, have resulted in the necessity for a taxonomic revision of the group. Here I neotypify two species described by Rafinesque for which no type specimens exist, *O. cespitosa* and *O. mesacantha*. I also change the taxonomic status of a species described by J.K. Small, *O. lata*, to subspecific rank, with the new combination ***O. mesacantha* subsp. *lata* (Small) Majure comb. et stat. nov.** *Opuntia macrарtha* Gibbes also is neotypified based on material collected by J.K. Small from around the type locality for that taxon, as is *O. atrocapersis*, for which no type has ever been located.

Members of the *Opuntia humifusa* complex, primarily of eastern North America east of the Mississippi River, have been included in numerous treatments (Britton & Rose 1920, 1923; Small 1903, 1913, 1919, 1933; Radford et al. 1968; Benson 1981; Doyle 1990; Pinkava 2003; Wunderlin & Hansen 2011). However, there still are specific taxa within the group that have not been typified (e.g., *O. cespitosa* Raf., *O. mesacantha* Raf.; Rafinesque 1830) or for which the type specimens no longer exist (e.g., *O. macrарtha* Gibbes) or have never been found (*O. atrocapersis* Small; see Benson 1982). This group is the subject of a taxonomic revision (Majure et al. in prep.) and has been studied in detail from a phylogenetic as well as morphological and cytogenetic standpoint (Majure & Ervin 2008; Majure & Ribbens 2012; Majure et al. 2012a & b, 2013; Majure et al. in prep.). These recent studies also have provided evidence for the recognition of subspecific taxa of two distinct ploidal levels (diploid and tetraploid; Majure et al. 2012b; Majure et al. in prep.) within the more widespread species, *O. mesacantha*. That nomenclatural change is also provided below.

Opuntia atrocapersis Small, Man. SE. Fl. 905. 1933. TYPE: not found. NEOTYPE (designated here): USA. Florida. Monroe Co.: sand dunes; Middle Cape Sable, 28 Nov 1916, *J.K. Small s.n.* (US!).

Opuntia cespitosa Raf., Bull. Bot. Seringe. 216. 1830. TYPE: not designated by the author. NEOTYPE (designated here): USA. Kentucky. Woodford Co.: Hwy 60 N at jct. of Hwy 62, just N of Versailles, 9 Jun 2008, *L.C. Majure 3275* (neotype: FLAS!; isoneotype: US!). Note: the specific epithet for this taxon is often spelled “*caespitosa*,” Rafinesque (1830), however, first published the name as “*cespitosa*,” so that spelling is maintained here. Non *Opuntia caespitosa* Poepp., Reise Chile 356. 1835.

Opuntia mesacantha Raf. Bull. Bot. Seringe. 216. 1830. TYPE: not designated by the author. NEOTYPE (designated here): USA. Virginia. Hampton, 31 May 1878, *J.W. Chickering, Jr. s.n.* (US!).

Opuntia mesacantha* subsp. *lata (Small) Majure, comb. et stat. nov. *Opuntia lata* Small, Jour. N. Y. Bot. Gard. 1919. TYPE: USA. Florida. [Alachua Co.], pine-woods, 12 mi W of Gainesville, 13 Dec 1917, *J.K. Small s.n.* (holotype: NY!).

Opuntia macrantha Gibbes, Proc. Elliott Soc. Nat. Hist. 1: 273. 1859. TYPE: USA. South Carolina. within a few miles of Charleston, [1 Sept 1857, presumably collected by Gibbes], no repository cited. Gibbes' collection was housed at, and subsequently disappeared from, the Charleston Museum during the US Civil War (see Benson 1982). NEOTYPE (designated here): USA. South Carolina. Charleston Co.: Isle of Palms, near Charleston, 14 Feb 1916, J.K. Small s.n. (neotype: US!; isoneotypes: NY! US!).

ACKNOWLEDGEMENTS

I thank the curators of the New York Botanical Garden (NY) and the US National Herbarium (US) for specimen loans used in this study and K. Perkins, N. Williams, T. Linder for help with processing loans at the University of Florida Herbarium (FLAS). I also thank W. S. Judd for comments on a previous version of the manuscript.
